1. EXECUTIVE SUMMARY

This document, prepared by Fidon Developer, outlines the full scope, architecture, technology stack, timelines, and cost structure for the development of a professional, globally accessible website for Jadevine Travel & Tours. The platform will serve as the company's primary digital presence, enabling international tourists to discover, browse, and book all of Jadevine's services online.

As a Zanzibar-based travel company, Jadevine offers hotel bookings, safari & tour packages, car rentals, and domestic flights across Tanzania. The proposed website will transform the company from a locally-operating business into a globally visible brand, accessible to tourists from Europe, America, Africa, the Middle East, and beyond.

Primary Goal	Target Audience
Global online marketing and self-service booking platform for Jadevine Travel & Tours.	International tourists from around the globe planning travel to Tanzania.

2. COMPANY BACKGROUND

Jadevine Travel & Tours is a tourism company headquartered in Zanzibar, Tanzania. The company specializes in delivering high-quality travel experiences to tourists visiting Zanzibar and Tanzania more broadly. Their current services include:

- Hotel Bookings — Partnering with hotels in Zanzibar and Dar es Salaam to accommodate tourists.
- Safari & Tour Packages — Guided experiences including Serengeti National Park safaris, Ngorongoro Crater tours, Zanzibar beach excursions, spice tours, and more.
- Car Rentals — Ground transportation services across Zanzibar and mainland Tanzania.
- Domestic Flights — Facilitating air travel on Tanzania's domestic flight routes.

Currently, the company's reach is limited to walk-in clients, social media and word-of-mouth referrals. The proposed website is the company's strategic step toward a global digital presence.

3. EXPECTED BUSINESS IMPACT

The proposed platform will deliver measurable business value to Jadevine Travel & Tours:

- Increased Global Reach — Accessible to international tourists 24/7 via search engines and online marketing.
- Higher Bookings & Revenue — Direct online booking reduces friction and improves conversion rates.
- Operational Efficiency — Automation of bookings, payments, and notifications reduces manual workload.
- Improved Customer Experience — Seamless, multilingual self-service booking with instant confirmations.
- Enhanced Trust & Credibility — Professional design, secure payments, and real customer reviews.
- Additional Revenue Streams — Commissions from third-party integrations (e.g., hotels and flights).
- Data Insights — Analytics to track performance and support better business decisions.

4. PROJECT OBJECTIVES

The website will achieve the following key objectives:

1. Establish a strong global digital presence for Jadevine Travel & Tours, discoverable by international tourists searching for Tanzania travel services online.
2. Enable 24/7 self-service booking for hotels, safaris & tours, car rentals, and domestic flights, removing the need for phone or email inquiries.
3. Support six international languages — English, French, Italian, Russian, Dutch, and Arabic — to reach the company's core international markets.
4. Build trust with international customers by displaying verified TripAdvisor reviews directly on the website.
5. Process payments securely using PesaPal (supporting Visa, Mastercard, and mobile money) with flexible options including pay-on-arrival for selected bookings.
6. Showcase the company's portfolio through a rich media Gallery of photos and videos from tours, safaris, hotels, and Zanzibar attractions.
7. Provide a professional Contact page enabling inquiries, custom tour requests, and partnership outreach.
8. Provide authenticated user accounts enabling tourists to manage their bookings, cancellations, and profile settings.
9. Provide Jadevine staff and mini-admin partners a powerful backend portal to manage all listings, bookings, users, and content.

5. WEBSITE STRUCTURE & PAGES

The website will consist of the following core pages and sections:

5.1 Home Page

The main landing page and the first impression for all visitors. It will include:

- Full-width hero section — A single, high-quality full-width photograph carefully selected to convey serenity, luxury, and premium travel. The image immediately communicates that Jadevine is a comfort-first, high-end brand. Overlaid on the hero will be the company tagline and a prominent search/booking widget.
- Quick-access booking tabs for Hotels, Safaris & Tours, Car Rentals, and Flights.
- Our Premium Services section — A visually rich section highlighting the four core services: Hotels, Safaris & Tours, Car Rentals, and Domestic Flights. Each service is presented with an icon, brief description, and a call-to-action link to its dedicated page.
- Featured packages section highlighting top-selling tours and safari packages.
- Why Choose Us section with company highlights, years of experience, and customer satisfaction stats.
- TripAdvisor review widget embedded to show real-time ratings and testimonials.
- Gallery Highlights section — A curated preview grid of 6–9 standout photos and short video clips drawn from the Gallery page, enticing visitors to explore more. Each item links to the full Gallery.
- Newsletter subscription section for marketing and retargeting.
- Language switcher in the navigation bar supporting all 6 languages.

5.2 Hotels Page

A dedicated searchable listings page for hotel accommodations in Zanzibar and Dar es Salaam:

- Search bar with filters: destination (Zanzibar / Dar es Salaam), check-in date, check-out date, number of guests, star rating, price range.
- Hotel cards showing name, photos, price per night, star rating, and a Book Now button.
- Individual hotel detail page with full photo gallery, room types, amenities, map, and TripAdvisor-linked rating.
- Booking form with date selection, guest count, room type, and payment options.
- Confirmation page and email confirmation sent to the customer upon successful booking.

5.3 Safaris & Tours Page

The flagship page showcasing all tour and safari packages offered by Jadevine. This is expected to be the highest-traffic page given the company's core business:

- Package cards with cover image, package name, duration, group size, price, and key highlights.
- Filter options: tour type (safari / beach / cultural), duration, price range, destination.
- Individual package detail page including full itinerary per day, inclusions & exclusions, what to bring, departure dates, and photo gallery.
- Highlighted packages may include:
 - Serengeti National Park Safari (multiple-day packages)
 - Ngorongoro Crater Tour
 - Zanzibar Beach & Snorkeling Package
 - Spice Tour — Zanzibar's famous spice farms
 - Stone Town Cultural Walking Tour
 - Kilimanjaro Climbing Package
 - Combined Safari + Beach packages
- Online booking form with date selection, number of participants, special requests, and payment options.

5.4 Car Rentals Page

A vehicle search and booking section for tourists needing ground transport:

- Search filters: pickup location, dates, vehicle type (sedan, SUV, minibus, 4x4 for safari)
- Vehicle listings with photo, specifications, price per day, and availability
- Individual vehicle page with full details, included services (driver/self-drive, fuel policy), and terms
- Booking form with driver details, pickup location, and payment options
- Option to add a bilingual driver for international tourists

5.5 Flights Page

A domestic flights booking section targeting tourists who need to travel between Tanzania's key destinations:

- Flight search form: origin, destination, departure date, return date, number of passengers
- Flight results showing airline, departure/arrival times, duration, and price

- Seat class selection (economy / business) where available
- Passenger details form and payment integration
- E-ticket/itinerary sent to customer by email after booking
- Powered by Amadeus API for real-time domestic flight availability
- **No Results Fallback** In cases where the Amadeus API returns no available flights for a searched route or date — due to no scheduled services, API limitations, or temporary unavailability — the system will display a message to the user rather than an empty or broken page. The message will read: *"No flights were found for your selected route or dates. This may be due to limited availability on this route. Please contact our team directly and we will be happy to assist you find the best travel option."*
- The message will be accompanied by a prominent Contact Us button linking directly to the Contact Us page, as well as a visible WhatsApp quick-contact link so the tourist can reach Jadevine immediately.

5.6 Gallery Page

A visually immersive media showcase to inspire tourists and build brand trust:

- Categorized photo and video gallery: Safaris, Beaches, Hotels, Stone Town, Wildlife, Sunsets and more
- High-resolution image grid with lightbox viewer (click to expand full-screen)
- Embedded video section for drone footage, tourist testimonial videos, and safari clips
- All media stored on AWS S3 for fast, reliable delivery globally
- Mobile-optimized for smooth viewing on smartphones and tablets

5.7 About Us Page

A trust-building page introducing the company to international visitors:

- Company story, mission, and vision
- Team profiles with photos and roles
- Company values and commitment to responsible tourism
- Licenses, partnerships, and certifications (Tanzania Tourism Board registration, etc.)
- Map of Jadevine's office location in Zanzibar

5.8 Contact Us Page

A professional contact page allowing tourists, travel agents, and partners to reach the company:

- Contact form with fields: Name, Email, Phone, Subject, Message, and Preferred Language
- Direct phone and WhatsApp links (click-to-call on mobile)
- Email address and social media links
- Google Maps embedded showing the office location
- Response time commitment statement (e.g. 'We respond within 24 hours')
- Separate inquiry types: General Inquiry, Custom Tour Request, Partnership, Press/Media

5.9 User Account Pages

Tourists will be required to create an account or log in before completing a booking. The user account section will include:

- Sign Up page — Email/password registration plus social login via Google & Facebook OAuth
- Log In page — Standard email/password login and social login options
- My Dashboard — A personalized landing page showing a summary of upcoming and recent bookings
- Booking History — Full list of all past and current bookings with status, dates, reference numbers, and payment details
- Manage Bookings — Ability to view booking details, request cancellation (subject to cancellation policy), and download booking confirmations
- Profile Settings — Update personal details: name, phone number, password, nationality, and preferred language
- Saved Favourites — Ability to save (wishlist) hotels, tour packages, or car listings for future reference
- Notification Settings — Choose to receive or opt out of booking reminders, promotional emails, and newsletter

6. BOOKING FLOW, PAYMENT OPTIONS & CANCELLATION POLICY

6.1 Booking Flow Overview

All bookings — whether for hotels, safaris & tours, car rentals, or flights — will follow a consistent step-by-step flow:

1. User browses a listing and clicks Book Now
2. Booking summary page — user reviews dates, guests/participants, pricing breakdown, and total cost
3. User must be logged in to proceed — if not, prompted to sign in or register
4. Payment options page — user selects how they want to pay (see Section 5.2 below)
5. Payment completed (online) or reservation locked (pay on arrival)
6. Booking confirmation page — reference number, summary, and next steps displayed
7. Automated confirmation email sent with booking details, itinerary, and payment receipt or deposit confirmation
8. Jadevine admin and (where applicable) the relevant mini-admin receive a new booking notification

6.2 Payment Options at Booking

To accommodate both international tourists who prefer to pay immediately and those who prefer to confirm arrangements before paying, the system will support two payment modes:

Option A — Pay Now (Online Payment)

The customer completes full payment at time of booking using PesaPal (Visa, Mastercard, M-Pesa, or other supported mobile money). The booking is immediately confirmed and a receipt is emailed. This is the default and recommended option.

Option B — Pay on Arrival (Reservation / Hold Booking)

For customers who prefer to pay in person upon arrival in Tanzania, the following approach will be implemented:

- The customer selects 'Pay on Arrival' during checkout. This option will only be available for services where Jadevine has direct control — i.e., locally managed hotels, directly owned

safari & tour packages, and direct car rental partners. It will NOT be available for Expedia-powered hotel bookings or Amadeus flight bookings, as those require instant payment.

- A non-refundable deposit (e.g., 20–30% of total booking value) may optionally be required at the time of reservation to secure the slot — Jadevine management decides whether to enforce a deposit. If a deposit is required, it is paid via PesaPal at checkout.
- The reservation is placed in a 'Pending Payment' status in the system. The slot is held for the customer.
- An automated confirmation email is sent to the customer detailing the booking reference, amount due on arrival, arrival instructions, and cancellation terms.
- The remaining balance is collected in cash or card by Jadevine staff on the day of arrival or service.
- Jadevine admin can manually mark the booking as 'Fully Paid' in the admin portal once payment is collected.
- If the customer does not show up and has not cancelled within the allowed window, the booking is automatically flagged and the deposit (if any) is forfeited.

6.3 Cancellation Policy & Flow

A clear cancellation policy is essential for a travel company, particularly one serving international tourists who may change plans. The system will handle cancellations as follows:

Cancellation Policy Tiers (Configurable by Jadevine Admin)

Jadevine will define the cancellation terms per service category. The system will enforce these automatically. A typical recommended structure is:

Cancellation Window	Refund Entitlement	Applies To
More than 14 days before service	Full refund (minus payment processing fee)	Hotels, Safaris & Tours, Cars
7–14 days before service	50% refund	Hotels, Safaris & Tours, Cars
Less than 7 days before service	No refund	All services
Flights	Subject to airline policy	Flights (via Amadeus)
Pay on Arrival bookings	Deposit forfeited on no-show	All direct services

These tiers are fully configurable by Jadevine administrators from the admin portal — they are not hardcoded and can be adjusted at any time.

How Cancellation Works (Customer Flow)

1. Customer logs into their account and navigates to Booking History
2. Customer clicks on the relevant booking and selects 'Cancel Booking'
3. System checks the cancellation window against the service date and displays the applicable refund amount
4. Customer confirms the cancellation request
5. System changes booking status to 'Cancelled' and logs the cancellation timestamp
6. If a refund is due, the system flags the booking for refund processing — refunds are issued back via PesaPal (automated where supported) or manually by Jadevine admin
7. Both the customer and Jadevine admin receive a cancellation confirmation email

- 8. For Pay on Arrival bookings — if cancelled within the refund window, any deposit paid is refunded; otherwise, it is forfeited per policy

Admin Cancellation Override

Jadevine admins can also cancel or modify any booking from the admin portal, with the ability to apply exceptions to the standard refund policy on a case-by-case basis (for example, emergency cancellations or VIP clients).

7. USER ACCOUNT SYSTEM & AUTHENTICATION

The website will use a full user authentication system, required for completing bookings. Authentication will be handled using django-allauth, which supports both standard email/password login and social login providers.

7.1 Authentication Methods

- Email & Password — Standard registration with email verification on signup
- Google OAuth — Sign in with Google account (one click)
- Facebook OAuth — Sign in with Facebook account
- Authentication is handled via Django's built-in session-based system, managed through django-allauth.

7.2 User Account Dashboard Features

Once logged in, a tourist's personal dashboard will provide:

Feature	Description
My Dashboard	Overview of upcoming bookings, recent activity, and personalized recommendations
Booking History	Full list of all bookings: status (Confirmed, Pending, Cancelled, Completed), dates, reference numbers, and amounts paid
Manage Bookings	View full booking details, download confirmation PDF, and initiate cancellation requests per cancellation policy
Profile Settings	Update name, phone, nationality, profile photo, and preferred language
Change Password	Secure form requiring current password + new password confirmation
Saved Favourites	Wishlist of saved hotels, tour packages, or car listings for future bookings
Notification Settings	Toggle email preferences: booking reminders, promotions, newsletter

8. ADMIN PORTAL

The website will include a powerful, role-based Admin Portal accessible only to authorized Jadevine staff and approved mini-admins. The portal is entirely separate from the public-facing website and is accessed via a secure login at a dedicated URL (e.g., /admin-portal/).

8.1 Admin Roles & Access Levels

The portal will support two distinct user roles, each with different permissions:

Role	Who They Are	Access Level
Super Admin	Jadevine's internal staff / owner	Full access to all features, all listings, all bookings, all users, and all settings
Mini-Admin	Individual hotel or car rental representative/partner	Limited access — can only manage their own listings and view bookings related to their listings

Upon first login, mini-admin users will receive a secure password setup link via email, requiring them to create their own password before accessing the system.

8.2 Super Admin — Full Feature List

A. Hotels Management

- Create, view, update, and delete local hotel listings
- Manage hotel details: name, location, description, star rating, room types, pricing, amenities, check-in/out policies, photos, and availability
- Upload hotel photos and videos (stored on AWS S3)
- Toggle hotel listings live/hidden from the public website

B. Car Rentals Management

- Create, view, update, and delete car rental listings
- Manage vehicle details: make/model, year, capacity, fuel type, transmission, price per day, included services (driver/self-drive), pickup locations, photos
- Toggle vehicle availability (e.g., mark as unavailable during maintenance)

C. Safaris & Tours Package Management

- Create, view, update, and delete safari and tour packages
- Manage package details: name, type (safari/beach/cultural), duration, group size, price, inclusions & exclusions, full day-by-day itinerary, departure dates, and photo gallery
- Set departure date availability and maximum participant slots per date
- Toggle packages live/hidden or mark as sold out

D. Gallery Management

- Upload, organize, and delete photos and videos for the Gallery page
- Categorize media: Safaris, Beaches, Hotels, Stone Town, Wildlife, Sunsets, etc.
- Set featured images for the Gallery Highlights section on the Home page
- All media files stored and served from AWS S3

E. Bookings Management

- View all confirmed, pending, cancelled, and completed bookings across all services
- Filter bookings by service type, date range, payment status, and user
- View full booking details: customer info, service, dates, amount, payment method, and status
- Manually update booking status (e.g., mark Pay on Arrival booking as Fully Paid)
- Apply cancellation exceptions and process manual refunds where required
- Export bookings to CSV for reporting and accounting

F. User Accounts Management

- View all registered customer accounts
- Search and filter users by name, email, registration date, and booking count
- View a user's full booking history
- Deactivate or reactivate user accounts (e.g., for abuse or fraud)
- Reset a user's password if requested

G. Mini-Admin (Partner) Management

- Create new mini-admin accounts for hotel or car rental partner representatives
- Assign each mini-admin to their specific hotel(s) or vehicle listings
- View and manage all mini-admin accounts
- Reset any mini-admin's password by sending a secure password reset link
- Deactivate a mini-admin account (e.g., when a partnership ends)

H. Newsletter Management

- View all email addresses collected through the newsletter signup form
- Export email list to CSV for use with email marketing tools (e.g., Mailchimp, SendGrid)
- Mark individual emails as active or unsubscribed

I. Contact Messages Management

- View all messages submitted through the Contact Us page
- Filter by inquiry type (General, Custom Tour, Partnership, Press)
- Mark messages as Read, In Progress, or Resolved
- Reply to messages directly from the admin portal (triggers an email to the customer)

J. Admin Account Settings

- Change own username
- Change own password (with current password confirmation)
- View login activity and last access timestamp

K. Cancellation Policy Settings

- Configure and update cancellation policy tiers per service category
- Set deposit percentage requirement for Pay on Arrival bookings
- Toggle Pay on Arrival option on or off globally or per service

8.3 Mini-Admin — Limited Access Feature List

A mini-admin is a partner representative (e.g., a hotel manager or car rental operator) who has been given access to manage their own listing(s) only. Their portal view is a restricted version of the full admin portal:

- Login — Secure login at the same admin portal URL; interface shows only their permitted sections
- My Listings — View, update, and manage only the hotel(s) or car rental listing(s) assigned to their account. They can add or update details, photos, pricing, and availability. They cannot delete listings (deletion requires Super Admin approval).

- My Bookings — View all bookings made for their specific listings: customer name, dates, booking status, and payment status. They cannot modify bookings — all changes must be routed to the Super Admin.
- Change Password — Ability to change their own password from within the portal
- No access to: other listings, other partners' bookings, customer accounts, gallery management, newsletter data, contact messages, or admin settings

9. MULTILINGUAL SUPPORT

The website will fully support 6 languages from launch, ensuring Jadevine can effectively market to its key source markets:

Language	Target Market	Priority
English	UK, USA, Australia, East Africa	Primary
French	France, Belgium, Switzerland, West Africa	High
Italian	Italy	High
Russian	Russia, Eastern Europe	High
Dutch	Netherlands, Belgium	Medium
Arabic	UAE, Saudi Arabia, Egypt, Oman	High

Arabic requires special Right-to-Left (RTL) layout handling across all pages. The language switcher appears persistently in the navigation bar, and the user's language preference is remembered across sessions. All booking forms, confirmation emails, admin notifications, and error messages will be translated into the selected language.

10. THIRD-PARTY INTEGRATIONS & APIS

10.1 TripAdvisor Reviews Integration

- Embeddable TripAdvisor Widget — Free, no approval required. Displays live TripAdvisor rating badge and recent reviews on Home page and listing pages.
- TripAdvisor Content API — Applied for upon launch. Enables programmable access to reviews, photos, and location data. First 5,000 API calls/month are free. Requires approval (1–3 weeks).

10.2 Hotel Inventory — Expedia Affiliate Network (EAN) and Expedia Travel Agency Affiliate Program (Expedia – TAAP)

- Requirements: Minimal — active website + 10 followers. Approval in 3–5 days.
- Commission earned: Up to 4.8% per hotel booking, paid monthly.
- Cost to integrate: Free.
- Booking.com Affiliate API will be applied for once the site has established traffic.

10.3 Domestic Flights — Amadeus API

- Free sandbox for development and testing. Production: pay-per-use, very low cost at startup volumes.
- Covers Tanzania domestic routes: Zanzibar, Dar es Salaam, Kilimanjaro, Arusha, Ruaha, Selous.
- Jadevine adds a fixed service fee per ticket as revenue

10.4 Car Rentals — Direct Local Partnerships

- Jadevine directly partners with local Zanzibar/Dar es Salaam car rental operators.
- Vehicles listed and managed via the admin portal. Jadevine earns a specified percent commission per booking.
- Discover Cars API can be added later after launch and solid traffic.

10.5 User Authentication — django-allauth

- Handles email/password registration, email verification, and social OAuth login (Google, Facebook, and others).
- Free and open-source. Well-documented Django package.

10.6 Media Storage — AWS S3

- All gallery images, hotel photos, tour package photos, and videos will be stored on Amazon AWS S3.
- AWS S3 provides highly reliable, globally fast CDN-backed file delivery.
- Cost: ~\$0.023 per GB/month for storage + minimal data transfer costs. For a startup with initial media library, estimated under \$5/month.
- Django integration via django-storages + boto3 packages.

11. PAYMENT INTEGRATION

11.1 PesaPal (Primary Payment Gateway)

PesaPal is the primary payment gateway, handling all online transactions:

Feature	Details
Payment Methods	Visa, Mastercard, M-Pesa, Airtel Money, Tigo Pesa, Halopesa, QR codes
Currencies	TZS (Tanzanian Shilling) and USD
API Cost	Free — no monthly fees
Transaction Fee	~3.5% per transaction
Sandbox	Available at developer.pesapal.com
Approval Time	3–7 business days after merchant registration
Startup-Friendly	Yes — no minimum volume requirements

11.2 PesaPal Integration Steps

- 1. Register a PesaPal Merchant Account at pesapal.com
- 2. Register a Developer Account at developer.pesapal.com and obtain sandbox API credentials
- 3. Integrate PesaPal REST API 3.0 into Django backend — handles payment initiation, IPN callbacks, and order status verification
- 4. Test all payment methods (Visa, Mastercard, M-Pesa) in sandbox
- 5. Submit for live account activation — approved within 3–7 days
- 6. Go live

11.3 Data Protection & Privacy

- The system will follow essential data protection and security best practices:
- Secure Transmission — All data protected via HTTPS (SSL encryption).
 - Secure Storage — Passwords encrypted; sensitive data not stored in plain text.
 - Payment Security — Transactions handled via PesaPal; no card data stored on the system.
 - Access Control — Role-based access for admins and secure user authentication.
 - Privacy Principles — Only necessary data collected, with transparency and user control.
 - Backups — Regular backups to prevent data loss and ensure recovery.
 - Third-Party Services — External integrations follow their own security and data policies.

12. TECHNOLOGY STACK

Component	Technology	Purpose
Backend Framework	Python / Django	Core web app, booking logic, API integrations
Frontend	HTML5, CSS3, JavaScript	Responsive UI across all pages
CSS Framework	Bootstrap 5	Mobile-first responsive design
Database	PostgreSQL	Bookings, users, packages, inventory
Authentication	django-allauth	Email, Google, Facebook OAuth login
Multi-language	Django i18n (gettext)	6-language support including RTL Arabic
Task Queue	Celery + Redis	Async emails, booking notifications
Media Storage	AWS S3 + django-storages	Gallery images, hotel & tour photos, videos
Email Service	SendGrid / Mailgun	Booking confirmations, cancellations, alerts
Flight API	Amadeus API	Tanzania domestic flight search & booking
Hotel API	Expedia Affiliate Network	Third-party hotel inventory & commission
Payments	PesaPal REST API 3.0	Visa, Mastercard, mobile money payments
Hosting	VPS (DigitalOcean / Hetzner)	Production server
Web Server	Nginx + Gunicorn	Production deployment
SSL Certificate	Let's Encrypt (free)	HTTPS security
Version Control	Git / GitHub	Code management and backups

13. SEO & DIGITAL MARKETING FEATURES

- SEO-Optimized Page Structure — Proper meta titles, descriptions, header tags, and Schema.org structured data for tours, hotels, and local business.
- Multilingual SEO — Each language version has its own URL (e.g., /fr/, /ar/, /it/) with hreflang tags for correct Google indexing.
- Google Analytics 4 — Traffic tracking, user behavior, and booking funnel analysis.
- Google Search Console — Monitor search rankings for all 6 language versions.
- Sitemap.xml and Robots.txt — Auto-generated for all pages and languages.
- Fast Page Speed — Optimized images via AWS S3 + CloudFront CDN, lazy loading for gallery
- WhatsApp Chat Button — Floating button on all pages for instant tourist contact.
- Social Media Integration — Links to Instagram, Facebook, and TripAdvisor throughout the site
- Newsletter Signup — Email list building for future marketing campaigns.

14. PROJECT TIMELINE & MILESTONES

The project is proposed to be delivered in five phases over approximately 11 – 14 weeks, reflecting the expanded scope including user accounts, cancellation management, and the full admin portal with mini-admin functionality.

Phase	Name	Deliverables	Duration
1	Foundation & Design	Django project setup, UI/UX design for pages such as Home page, About Us, Contact Us, multilingual skeleton (all 6 languages), AWS S3 configuration	1–2 Weeks
2	Core Booking Pages	Hotels, Safaris & Tours, Car Rentals, Flights pages with search, listings, and detail pages. Booking flow with Pay Now and Pay on Arrival options.	2–3 Weeks
3	User Accounts & Admin Portal	Full user dashboard (booking history, profile, favourites, notifications). Full admin portal with Super Admin features. Mini-admin role and restricted portal view.	2–3 Weeks
4	Payments & Integrations	PesaPal integration (Pay Now + deposit for Pay on Arrival), Expedia API, Amadeus flights API, TripAdvisor widget, cancellation logic, automated emails.	2–3 Weeks
5	Gallery, QA & Launch	Gallery page, AWS S3 media uploads, full translation finalization, cross-browser & mobile testing, SEO setup, performance optimization, deployment to live server.	2–3 Weeks

Note: Timelines assume Jadevine provides required content (photos, package descriptions, hotel details, pricing) in a timely manner i.e. within 5 business days after request by developer at each phase. Delays in content delivery will extend timelines accordingly.

15. PROJECT DELIVERABLES

- Fully functional live website hosted on production server with SSL (HTTPS).
- Upon full payment, Jadevine Travel & Tours will have full ownership of the source code, website assets, and system, excluding third-party licensed components.
- Full admin portal with Super Admin and Mini-Admin role functionality.
- User account system with email + social login and full dashboard.
- Booking system with Pay Now and Pay on Arrival options, and automated cancellation management.
- PesaPal payment gateway fully integrated and tested (live transactions ready).
- Expedia and Amadeus API integrations live and functional.
- TripAdvisor review widget embedded and configured.
- Gallery page with AWS S3 media storage, all provided photos and videos uploaded.
- Multilingual site in all 6 languages including RTL Arabic.
- SEO setup: sitemap, meta tags, Google Analytics, Search Console.
- Technical documentation: system architecture, admin portal user guide, and mini-admin guide.
- 30-day post-launch support — see Section 20 for full terms.

16. INDICATIVE COST ESTIMATE

The following is an indicative development cost breakdown reflecting the full expanded scope including user accounts, cancellation management, and the complete admin portal with mini-admin functionality. Final figures are subject to negotiation.

#	Component	Estimated Cost (TZS)	Notes
1	Phase 1 — Foundation & Design	300,000 – 400,000	UI/UX, Home, About, Contact, AWS S3
2	Phase 2 — Core Booking Pages	500,000 – 600,000	Hotels, Tours, Cars, Flights + booking flow
3	Phase 3 — User Accounts, Auth & Admin Portal	500,000 – 600,000	User dashboard, Auth, full admin portal, mini-admin roles
4	Phase 4 — Payments & Integrations	400,000 – 500,000	PesaPal, Expedia, Amadeus, cancellation logic
5	Phase 5 — Gallery, QA & Launch	300,000 – 400,000	Gallery, testing, SEO, deployment
	TOTAL ESTIMATE	2,000,000 – 2,500,000	Negotiable based on scope & payment plan

Ongoing monthly costs (borne by Jadevine after launch):

- Server/Hosting: ~32,000 TZS – 50,000 TZS/month (VPS — DigitalOcean or Hetzner).
- Domain Name: ~25,000 TZS – 40,000 TZS/year.
- AWS S3 Storage: ~6,000 TZS – 30,000 TZS/month depending on media volume.
- Email Service (SendGrid): Free tier for first 100 emails/day.
- Amadeus API: Pay-per-use, typically under 26,000 TZS/month at startup traffic (optional).
- PesaPal: No monthly fee — 3.5% transaction fee per booking only.

Development Payment Schedule: A deposit of 30% is due upon project commencement, 30% after phase 3 and the remaining 40% due upon launch of the live website.

17. CLIENT RESPONSIBILITIES

For the project to proceed on schedule, Jadevine Travel & Tours will be responsible for providing:

1. High-quality photos and videos of all tours, safari packages, hotels, beaches, and Zanzibar attractions — minimum 5–10 photos per package.
2. Written descriptions for safari & tour packages in English for testing.
3. Hotel names, locations, room types, amenities, and pricing for direct hotel partners.
4. Car rental vehicle list with specifications, pricing, and photos.
5. Company information for the About Us page: history, team details, and certifications.
6. Logo in high-resolution (SVG or PNG) and brand color guidelines.
7. PesaPal merchant account registration — developer assists, but business documents provided by Jadevine.
8. AWS account creation (free tier available) — developer configures S3 bucket and credentials.
9. Domain name registration (e.g., jadevinetours.com).
10. Active TripAdvisor business listing.
11. Decision on cancellation policy tiers and deposit percentages for Pay on Arrival.
12. Timely feedback and content approvals at each project phase.
13. Content Translations: Jadevine Travel & Tours is responsible for providing accurate translations of all non-English website content. This includes package descriptions, hotel listings, car rental details, and marketing text. Translated content must be delivered alongside the English content for each phase to avoid delays. Fidon Developer will implement the translations as provided but bears no responsibility for their accuracy or quality. Correction of translation errors after implementation is not covered under the 30-day bug fix window. If translations for any language cannot be delivered by launch, that language version will be deferred to a subsequent update at a separately agreed timeline and cost.

18. RISKS & MITIGATION

Risk	Likelihood	Mitigation
API approval delays (Booking.com, TripAdvisor Content API)	Medium	We'll start with Expedia + TripAdvisor widget, then apply for others in parallel.
Content not delivered on time by Jadevine	Medium	Phased model — each phase only needs its relevant content. Templates provided.
PesaPal integration issues	Low	Dedicated Tanzania support. Full sandbox testing before go-live.
Arabic RTL layout complexity	Medium	Bootstrap RTL + Django i18n. Budgeted into Phase 1.
Scope creep (new features mid-project)	Medium	Additions outside this document scoped and quoted separately before work starts.
Mini-admin misuse or unauthorized access	Low	Role-based permission system enforced server-side. Mini-admins can only see their own data.

19. DEVELOPER RECOMMENDATIONS

- Use PesaPal only for payments at launch — it covers Visa, Mastercard, and all local mobile money in one integration.
- Make Pay on Arrival optional per service — do not apply it to Expedia hotel bookings or Amadeus flights, as those require instant confirmation.
- Require a deposit (even 20%) for Pay on Arrival bookings — it significantly reduces no-shows without deterring genuine customers.
- Use direct car rental partnerships rather than an API — better Tanzania inventory, higher margins, no approval wait.
- Create a TripAdvisor Business Listing immediately (if not already) — free and foundational for both the widget and eventual API access.
- Invest in professional photography early — travel is a visual industry. Photo quality directly impacts booking conversion rates.
- Register a WhatsApp Business account for Jadevine — the floating WhatsApp button will likely become the highest-converting contact point.
- Register the domain name as soon as possible (e.g., jadevinetours.com) — allows email setup and brand consistency before launch.
- Apply for the Expedia Affiliate Program immediately — minimal requirements, approval within days. I (developer) will do this.
- Create an AWS account on the AWS Free Tier — S3 free tier includes 5GB storage which is enough to begin media uploads during development. I (developer) will do this.

20. NEXT STEPS

1. Review this document — Jadevine reviews, provides feedback, and confirms the scope is complete and accurate.
2. Negotiation meeting — Fidon Developer and Jadevine agree on final cost, payment schedule, and project start date.
3. Signed agreement — A project agreement is signed by both parties referencing this document as the scope baseline.
4. Content collection begins — Jadevine starts gathering photos, package descriptions, and hotel information.
5. Technical Setup — Fidon Developer registers all API accounts, including Expedia affiliate, Amadeus sandbox, PesaPal sandbox, and AWS S3.
6. Development starts — Phase 1 begins.
7. Any additional features or changes requested outside the agreed scope of this document will be documented, estimated, and subject to client approval before implementation.

21. WARRANTY & POST-LAUNCH SUPPORT

30-Day Bug Fix Window: Following the official launch of the website, Fidon Developer will provide 30 days of complimentary post-launch support covering bug fixes and minor adjustments directly related to the agreed and delivered scope. This includes resolving any functional errors, display issues, or integration failures that were not present during final testing.

What Is Covered in the 30-Day Window:

- Bugs and errors arising from code delivered under this project.
- Minor UI adjustments (spacing, alignment, text corrections).
- Configuration issues with integrated APIs (PesaPal, Amadeus, Expedia, AWS S3).
- Email delivery issues for booking confirmations and notifications.

What Is Not Covered: The following are outside the scope of the 30-day support window and of this agreement entirely, unless separately quoted and agreed upon in writing:

- New features or functionality not described in this document.
- Changes to business logic, pricing structures, or cancellation policy configuration (these are manageable by Jadevine via the admin portal).
- Third-party API changes, deprecations, or pricing adjustments made by Amadeus, Expedia, PesaPal, TripAdvisor, or AWS after launch.
- Content updates such as adding new tour packages, hotels, photos, or translations
- Issues arising from Jadevine's own actions in the admin portal (e.g., accidental deletion of listings).
- Hosting, domain, or email service issues that fall under Jadevine's own accounts.

Extended Support — Optional Retainer: After the 30-day window closes, Jadevine may engage Fidon Developer for ongoing maintenance and support under a separate monthly retainer agreement. This would cover scheduled updates, security patches, performance monitoring, and priority bug resolution. Terms and pricing for the retainer will be agreed separately if required.

No Warranty on Third-Party Services: Fidon Developer makes no warranty regarding the uptime, availability, or continued operation of third-party services including but not limited to Amadeus, Expedia, PesaPal, AWS, TripAdvisor, Google OAuth, and Facebook OAuth. Any disruptions caused by these providers are outside the developer's control and responsibility.

22. PROJECT AUTHORIZATION

By signing below, both parties confirm that they have reviewed, understood, and agreed to the scope, terms, timeline, and cost outlined in this proposal. This document serves as the formal basis for the project agreement between Jadevine Travel & Tours and the Developer.

Any changes to the agreed scope will be handled in accordance with the change request process defined in this document.
